DATA TRANSMISSION AND PROCESSING

V.K. Zlobin, A.M. Kochergin. ALGORITHMS AND TECHNOLOGIES OF IMAGE PREPROCESSING IN THE EARTH REMOTE SENSING DATA CATALOGING SYSTEMS

Algorithms and technologies of image preprocessing in the Earth remote sensing data cataloging systems are shown. They allow in pace of data reception from modern remote sensing systems to provide the space videodata address distribution in archives, its evaluation and, if necessary, the improvement of its quality5

V.V. Ereemeev, E.P. Kozlov. AUTOMATIC MATCHING OF IMAGES FROM GEOSTATIONARY SPACE-BASED EARTH OBSERVING SYSTEMS USING ELECTRONIC MAPS

A geodetic connection technology of images received from geostationary satellites is examined. The technology is based on automatic combining of unique patches of coastlines, placed on space images, with binary masks, which are formed from electronic maps and allow for coastlines topology as well as brightness, land and water surface positioning..... 14

Yu.M. Korshunov. MODELING MULTIDIMENSIONAL STATISTICAL DATASET ALONG WITH GIVEN CORRELATION PROPERTIES

The algorithm letting to obtain the multidimensional statistical dataset using the given covariance matrix is described. The correlation properties of the obtained dataset are tight to the properties conditioned by the given covariance matrix21

A.A. Fefelov. ESTIMATION OF QUASI-SINGULAR INTEGRALS AT NUMERICAL EMBODYING THE METHOD OF BOUNDARY ELEMENTS IN THREE-DIMENSIONAL NOT AXIALLY SYMMETRIC PROBLEMS OF THE THERMAL CONDUCTION

The procedure of a numerical estimation of the integrals entering in the second formula of Green at a task solution about searching of value of temperature in points near to defining boundaries of three-dimensional not axially symmetric area is featured24

V.V. Strotov. IMAGE SHIFTING PARAMETERS ESTIMATION IN MOVEMENT DETECTION TASKS

Survey of base image shifting estimation approaches in different movement detection tasks is submitted. Algorithm of shift parameters estimation, based on reference areas selecting and their tracking is proposed. Results of this algorithm statistical examination are given.....30

B.A. Alpatov, P.V. Babayan. EXTRACTION OF MOVING TARGETS FROM THE MULTISPECTRAL IMAGE SEQUENCE, DISTORTED WITH GEOMETRIC TRANSFORMATIONS

In this paper new algorithm of moving targets extraction from multispectral image sequence is offered. The mathematical model, used during algorithm development, takes into consideration the presence of geometrical distortions, caused by image sensor motion and atmospheric nonuniformity.....37

V.A. Zenin, A.E. Kuznetsov, V.I. Pobaruev. ALGORITHM OF RADIOMETRIC CORRECTION OF IMAGES WITH THE NON-UNIFORM PLOT, RECEIVED FROM THE SPACE VEHICLE «RESOURCE DK»

The algorithm of radiometric correction of the images, based on preliminary clusterization of picture and the subsequent processing of everyone cluster on the own parameters is offered. Ways of acceleration of its work due to thin out images and multithreaded calculations that has led to reduction in an operating time on 72 % are described. Results of processing of the real data, proving advantages of the offered approach in comparison with traditional are shown.....43

RADIOTECHNICAL AND MEASURING SYSTEMS

V.K. Klochko. RADIOIMAGE THE RESOLUTION ABILITY

Three-dimensional radio-image of surface and objects on surface forming algorithm with higher resolution ability by angle coordinates is offered 49

S.N. Kirillov, V.T. Dmitriev, D.E. Krysyayev S.S. Popov. STUDY QUALITY SENT SPEECH INFORMATION UNDER DIFFERENT COMBINATION OF THE CODING THE SOURCE AND CHANNEL RELATIONSHIP IN CONDITION OF THE ACTION OF THE HINDRANCES IN CHANNEL RELATIONSHIP

The Organized study to stability algorithm joint coding the source and channel relationship at transmission of speech information to action broadband, narrow-band and structured hindrances. The analyzed codeks of the source on base pulsed-code inflexion (IKM), adaptive delta-inflexions (ADM) and adaptive differential IKM (ADIKM) and canal antinoise codeks on base of the codes Hemming and Bouza-CHoudhuri-Hokvingema. They are shown optimum combinations source and channel codeks relationship for miscellaneous send rate and type of the hindrances in channel 53

A.S. Bogdanov, V.P. Lichshishin. FREQUENCY CHARACTERISTICS OF A RESONANCE AMPLIFIER OF POWER WITH DIVIDED LOAD

Frequency characteristics of resonance amplifiers of power with divided load are considered. It is shown that worker passband such stages can be limited not only by a value of a factor of power transfer, but also a value of a factor to stability, which on edges worker band of frequencies must remain in permissible limits. An approach to building of schemes of stages of resonance amplifiers of power with divided load, allowing get the more even frequency dependencies of factors to stability in permissible range of the change of their values is offered 56

A.A. Minko. IDENTIFICATION OF LINEAR OBJECT BY REACTION ON HARMONIC SIGNAL

The algorithm of the generalized identification is offered on the basis of integral two-parametric transformations of Gausse of linear stationary object by its reaction on a sinusoidal signal. Experimental verification of capacity of the developed algorithm, confirming its very high efficiency, is conducted..... 63

O.K. Abramov, V.M. Bezuglov. THE NOISE-RESISTANT MEASUREMENT OF A LITTLE SEISMIC SIGNALS

It is considered the problems of the measurement of a little seismic signals with combinations of high industrial noise and earth tremors. A solution of this task is very important for investigations of a seismic regime in the great industrial areals 68

T.A. Akimenko, E.V. Larkin, O.A. Luchanskiy. TECHNICAL VISION SYSTEM OF MOBILE ROBOT VEHICLE

A method of blur parameters evaluation of images being formed by mobile robot vehicle technical vision system is proposed. Dependencies for vision system space-frequency transfer function, those take into account vision system truck oscillations on vertical linear and longitudinal/diametrical angle coordinates, are obtained 77

Y.A. Aldunin. CLIENT-ORIENTED MODELS AND WAYS OF ITS REALIZATION

This article is about main client-oriented consistency models. Ways of its realization are given then. Main problems of realization are described at the end of article with its ways of the decision 80

COMPUTER SCIENCE AND COMPUTER ENGINEERING

D.Y. Kashalkin, V.A. Kurchidis. SEMANTIC COMPOSITION OF SERVICES

Basic concepts and architecture (SSOA) are considered, which are used to solve integration problem of components in distributed information systems on semantic level/ A format description of architecture elements realized and has been used in suggested decision method of semantic composition services. Method uses semantic register SSOA and its functional model represent as a Petri net. Decision is based on discovery and selection of the set of services which semantically match to the user's request.....84

I.A. Telkov, A.V. Bakulev, M.A. Bakuleva. THE ALGORITHM OF DATA WAREHOUSE DESIGN

The article devoted to present the algorithm of data warehouse design based on tensor algebra. This algorithm allows increase performance of data warehouse design.....90

A.K. Mysolin, V.V. Klenov. LAYER MANAGEMENT OF ILLUMINATION OF PLACEMENTS INDUSTRIAL PURPOSE

A problem solving an economical expenditure of the electric power is offered at illumination of placements industrial purpose by use a microprocessor control systems by hardwares of illumination.....93

S.V. Svechnicov. THEMATIC CATEGORIZATION OF WEB-SITES IN THE INTERNET

The article deals with approaches to generation of algorithms of search, analysis and categorization of web-sites. There is introduced a solution for indexing and automatic categorization of internet resources by means of extraction of terms and assignment of weighting coefficient to them, what allows a web-site content.....96

M.A. Butov, V.N. Loktyukhin, O.A. Maslova, A.A. Tcherepnin. THE USE OF FUZZY LOGIC IN VIDEOENDOSCOPY SYSTEM WITH EXTENDED FUNCTIONALITIES

The principles of the construction of the decisions making support computer system in videoendoscopy system with extended functionalities are considered for preciser accounting the illness's history stuffs and the force of many pathogenetic factors influence on disease during diagnosis establishing. The use of the fuzzy logic conclusion system for such data at diagnostics of the stomach and boweos diseases is describing in this article 101

ELECTRONICS

S.S. Volkov, S.V. Nikolin, N.P. Shevchenko. THE CAUSES OF RISE FORCES IN ELECTROMAGNETIC AND QUANTUM SYSTEMS

Classified kinds of magnetic fields and the forces of electromagnetic systems. Showed, that the causes of the appearance all of the forces interactions in the electromagnetic systems appear come the interaction systems the motive charges particles with rotate magnetic fields around about the particle and diminish free the energy of the magnetic field 107

V.A. Korotchenko, D.V. Suvorov. INFLUENCE RATE OF PULSE RISE ON PARAMETERS VOLUME GAS DISCHARGE

Dependence overvoltage from rate of pulse rise, in the volume gas discharge are determine by numerical calculation with the approaching the fluid model. For the conditions nitrogen laser with pumping transverse discharge, it is established, that growth of a maximum of inversions levels $C^3\Pi_u - B^3\Pi_g$ considerably (more than once) are slowed down with increase rate of pulse rise at pressure in the range $10^{11} - 10^{13}$ V/s or values peak capacity from 1 up to 10 nF. Existence of optimum rate of pulse rise on an discharge gap at which efficiency of the laser is maximal is shown 114

T.G. Avacheva, E.V. Balashov, S.P. Vikhrov, N.V. Bodyagin, S.M. Mursalov, P.E. Starov. RESEARCH OF SURFACE STRUCTURE OF THE NONCRYSTALLINE MATERIALS WITH APPLICATION OF THE SELF-ORGANIZING THEORY AND ATOMIC-FORCE MIKROSCOPY

The analysis of modern research methods of a materials surface is carried out. The algorithm of account of the average mutual information between points of a material surface is described. By developed technique the surfaces of crystal, polycrystalline and noncrystalline silicon are investigated. The conclusions are made that the given technique allows to distinguish materials surfaces of various structural organization, to reveal far-working correlation in these structures 118

O.V. Rozhkov, M.A. Burobin. THE INFLUENCE OF THE SHAPE OF ELECTRODE BOUNDARY REGIONS AND WORKING HOLES ON THE POTENTIAL DISTRIBUTION IN A ION TRAP

The calculation results of the multipole constituents' weighting coefficients of the potential distribution in the useful capacity of the ion trap are given. Different configurations of the electrode system boundary region are taken into consideration, as well as the influence of the electrode working holes on the potential distribution in the analyzer useful capacity 122

O.A. Gorlin. THE RYAZAN STATE RADIO ENGINEERING UNIVERSITY

With the use of the program of numerical modelling calculations of electronic efficiency in a nonlinear mode are carried out without taking into account a spatial charge on a 0-mode of fluctuations of the first zone of generation. It is established, that at the optimum sizes and operating modes reaches 57.45 % 125

BRIEF REPORTS

A.E. Chizhikov, S.S. Burukin. STUDY OF PROCESSES ON SURFACE OF PLASMA DISPLAY PANEL CATHODES DURING ACTIVATION IN DISCHARGE

The analytical and experimental investigations of processes during activation the cold cathode of hexaborid of lanthanum in DC PDP developed. Possibility of LaB₆-particle melting and formation of entire thin layer on the cathode surface are confirmed 129

E.V. Mamontov, V.S. Gurov, I.V. Philippov, A.A. Dyagilev. TIME-OF-FLIGHT MASS SPECTROMETER WITH LINEAR RF ELECTRIC FIELD

A new RF time-of-flight mass spectrometer is described. This instrument combines two types of mass analyzers: quadrupole and time-of-flight mass spectrometers. This allows us to carry out time and space focusing of sorted ions within the linear electric RF field created by a set of plane discrete electrodes. Time-of-flight mass-spectrometer with linear RF electric field and its structure scheme are described 131

R.A. Kalachik. AUTOMATIC SEGMENTATION ALGORITHM WITH SEGMENT AGGREGATION FOR IMAGE SEARCHING SYSTEMS

The article deals with representation of automatic image segmentation results as a new structure named tree of segment aggregation. Modification of Kruskal's algorithm which provides generation of the tree is developed. Results of experiments with the algorithm are brought 135

N.V. Lobanov. CATERPILLAR VEHICLE TORSION SUSPENSION SIMULATION

In this paper we consider caterpillar vehicle torsion suspension formulized model, that can be used as such for research of it's technical facilities, under influence of various factors, and in such field like computer graphics and animation in order to synthesize more sophisticated images 139

V.V. Kotov, N.A. Kotova, V.A. Sokolov. FAIL-TOLERANCE OF SYSTEMS WITH ACTIVE RESERVING (WITH BLOCK SWITCHING)

Based on reserving scheme a Petri-Markov Net modeling a process of faults and recoveries in a system with block switching is built. A formula of fault time of system is brought 141

A.N. Dobytchin., V.G. Matusov, V.I. Terekhin. KEY FACTOR FOR MANAGEMENT OF DEVELOPING AGENCY'S BUSINESS COST

The article grounds the management features for a developing enterprise dedicated to special purpose equipment design. It also shows that proactive R&D work is required to provide strategical competitiveness of such enterprises. The authors state the fundamentals of the designed method for substantiation of proactive work on basis of option theory 143

THE ITEMS OF INFORMATION ON THE AUTHORS 147
